

Alex A. Wiseguy

Final report on the internship at Mogulovich International

Internship Report

Bachelor's degree program
Universal Computing
University of Applied Sciences Upper Austria
Hagenberg

Year of submission: 2027

Internship:

Mogulovich International Media GmbH
Online Division
Hubertusgasse 3a, 1020 Wien

Abstract

Scope of the abstract: approx. 200 words.

General content of the report: This report describes the course of the internship, the tasks and projects carried out and the experiences gained. The own activities (projects) are of course the focus and form the main part of the report. If many small projects were worked on, some of them should be described in more detail as examples. In addition to the actual work, the following other aspects should also be taken into account:

- Workflows within the company or in projects (graphic representations can be useful here),
- Working and management style, communication within the company,
- External communication (customers, partners),
- Time situation, deadline problems,
- Embedding in the team, social experiences,
- Use of special techniques, methods and tools,
- Important challenges or difficulties,
- Requirements with regard to training during studies (knowledge that can be used well, deficits).

The following chapter headings are only intended to serve as an orientation for the structure of the report; you can of course decide on the specific division and wording yourself.

Chapter 1

The Company

Extent: 1–2 pages

Chapter 2

Projects and Activities During the Internship

Extent: 2–3 pages (project goal(s), project environment)

Chapter 3

Project Examples

Extent: 5–6 pages (implementation, rough schedule, results, quality assurance measures)

Chapter 4

Experiences and Summary

Extent: 1–2 pages

Documentation of Generative AI Tool Usage

Responsible use of the AI tools

Statements on responsible use of AI tools	**Confirmation: Yes**
I/we confirm that the outputs generated by AI tools have been verified for accuracy and corrected where required.	☒
I/we acknowledge that the responsibility for the thesis lies with the author(s), and not with the AI tools or any other person.	☒

Detailed activities for which the tools were used

Activity	**Description**	**Tools used (if any)**	**Description of the tool usage** (type of usage, affected sections of the paper/thesis, etc.)
Idea generation & conceptual-ization	• Generating ideas, objectives and research questions • Identifying and defining relevant concepts and theoretical models • Development of a conceptual framework for the content	—	—
Literature search and analysis	• Search for relevant literature • Reviewing potentially relevant literature • Summaries of relevant literature	Perplexity	Search for literature on ...
Methodology	• Search for an appropriate methodology • Development and adaptation of the methodology to the research question(s)	—	—

Activity	**Description**	**Tools used (if any)**	**Description of the tool usage** (type of usage, affected sections of the paper/thesis, etc.)
Coding	• Creation and documentation of code, algorithms, and software • Testing and debugging of existing code, algorithms, software • Understanding and analysis of existing code, algorithms, and software	—	—
Data collection and analysis	• Collection of primary or secondary data • Qualitative data analysis (including summarizing and coding) • Quantitative data analysis (including statistics) • AI-assisted mathematical, computational, or other formal techniques for modeling, simulation, and analytics	—	—
Interpretation and Validation	• Interpretation of results • Derivation of implications for research and practice • Verification of the overall replicability/reproducibility of the results and other research outputs	—	—
Structuring and planning the text	• Structure of the thesis • Structuring of individual sections of the thesis (e.g., bulletpoint outlines per section)	—	—
Generating the text	• Generation of text for topics in various sections of the thesis (including title and abstract)	—	—
Translating text	• Translation of text written by the author(s) • Translation of text written by others	—	—
Reviewing & editing the text	• Critical review, feedback or revision of the content or grammar of the thesis • Proofreading • Rephrasing or paraphrasing text • Shortening / expanding the text	DeepL Write	Proofreading of the report
Citation Management	• Creation of the reference list • Formatting of the references	—	—

Further use of AI tools:
